

# ARE YOU READY FOR VISTA?

*Which statements are valid for you and your company?*

- We are already working on the migration to Vista.
- We have sufficient internal resources for migrating to Vista before 2008.
- The last migration within the company took less than a month, including planning and execution.
- We can find out, with the push of a button, if our IT infrastructure is compatible with Vista.
- We can migrate all our computers to Vista with a standard image.

*If you have checked all the statements, your company is ready for Vista. If one or several checks are missing, talk to us, the migration specialists from matrix42 – We will help you get ready for Vista!*

### Migration Without Night Shift

Whether it is an XP or a Vista migration, our customers are very satisfied.

#### Customer Voice ING-Diba:

Detlef Ebert, from ITO Project Management, was the person responsible for the Empirum project at ING-Diba. An eight-person team installed various test clients in three locations (Frankfurt, Hanover and Nurnberg). After the successful test installation, XP was rolled out in the entire company—automatically—from a central location. “We were through with it in three months,” says Bernd Brechelmacher, while stressing that from a purely technical point of view, this could have been done visibly faster: “We took into consideration the necessities in each department, which is why we performed a soft migration.”

## EMPIRUM PLAN THE FUTURE TODAY

Companies planning to use Vista in 2008 have already begun the implementation process, which according to Gartner, can take as long as 18 months. Empirum, a Software and Client Management solution, allows operating system migrations to become automated, and thus, visibly expedite standardized actions. matrix42 the company that develops Empirum is trusted by 18%<sup>1</sup> of Germany companies who already use the innovative solutions Empirum offers. matrix42 has also received the distinction of being named among the TOP 100 most innovative companies<sup>2</sup> in Germany.

## VISTA MIGRATION IN COMPARISON

## YOUR MIGRATION PROJECT WITH EMPIRUM

### 1 RECORDING THE ACTUAL STATUS AND CHECKING THE SYSTEM REQUIREMENTS

Empirum Inventory allows for the analyzation of the existing network with the push of a button. Empirum Management Console allows you to instantly see which computers do not fulfill system requirements and consider that information in relation to the planned migration.

### 2 BACKING UP THE PERSONAL DATA AND CONFIGURATIONS

All personal data and settings, like browser settings, dictionaries, Outlook contacts and similar are backed up with Empirum Personal Backup and then restored after the migration.

### 3 DEFINING THE COMPANY STANDARD

Define the target status according to Compliance.

### 4 MIGRATION OF THE COMPUTERS

From Windows NT/2000/XP to Vista.

### 5 RESTORING THE WORKING ENVIRONMENTS

Restore the personal data and settings with Personal Backup.

Operating systems can be installed automatically with Empirum completely and dynamically, without having to depend on inflexible images. The automated hardware detection is unique, allowing for the operating system installation without having knowledge of the destination hardware. Empirum offers a solution that combines Disaster Recovery, with operating system migration. The automated and complete restoring of personal data and configurations after a migration, avoids high productivity losses that occur with the manual restoring of user-specific configurations.

<sup>1</sup> Market share according to installed base in Germany.

<sup>2</sup> matrix42 has been elected by an independent jury in 2006 as one of the most innovative medium enterprises in Germany.
