ChangeBASE AOK

Migrating to Windows 7?

- How many applications will need to be ...migrated?
- ...tested?
- ...remedied?
- ...checked for their virtualizability?

While Windows 7 brings enhanced functionality and security, will the migration cost more than the benefits? The most significant cost in a migration project is the time involved to manually test and verify applications. ChangeBASE removes this time consuming and costly step by automatically identifying and fixing application compatibility issues – significantly reducing migration time, efforts and costs.

- ▶ **Assess current compatibility**
(Windows 7, Windows Vista, Server 2008 R2, 32- & 64-bit environment, Citrix XenApp, App-V)
- ▶ **Provide detailed RAG reports**
- ▶ **Identify incompatible applications**
- ▶ **Flag problems that can be remedied automatically**
- ▶ **Automatically fix applications that need to be remedied**
- ▶ **AOK applications check on dependencies from**
 - ▶ runtime issues
 - ▶ environmental changes between the old and new environments
 - ▶ applications' abilities to co-exist harmoniously with other applications

Test against 250,000 rules to detect, report and act on any identified issues or conflicts. 95% of changed applications are working on Windows 7.

Plan and Fix with ChangeBASE AOK

Early testing and piloting is essential for any company with a large portfolio. ChangeBASE AOK allows organizations to determine cost drivers, avoid most manual efforts and scale their migration projects. AOK identifies, tests and fixes compatibility problems, automates all steps required to create a new package and provides a high degree of cost transparency. Even organizations that have skipped Vista and migrated directly to Windows 7 still have to overcome all the compatibility issues PLUS the added restrictions (UAC, BitLocker etc.). AOK reduces the workload. It saves you money and time and allows you to divert skilled resources to other parts of the migration process. ChangeBASE AOK provides the complete solution for planning initiatives and resolving compatibility problems.

Reduced costs, simplified processes, faster deployments and the improved quality and consistency of applications are your benefits.

About ChangeBASE

Founded in 2006 and Headquartered in London, England, ChangeBASE is the provider and developer of AOK, a product that automates the management and upgrade of applications in a Microsoft environment. ChangeBASE AOK is the market leader in automated compatibility software enabling organizations to simplify and speed up the time it takes to test, remediate and manage the migration process between operating systems or deployment environments. The company has developed a suite of software applications which bring tangible benefits and reduced costs to organizations across the globe.

- ▶ **AOK analysis** includes the following file formats: Microsoft Setup executables (EXE's), WinInstall Setup files, Installshield Installation packages (EXE and ISS), Wise Installation packages (WSI, WSE and EXE), MSI Application packages (MSI, MST, MSP), Microsoft App-V files (SFT).
- ▶ **Analysis includes** a total of 500 application packages and 500 App-V SFT files.
- ▶ **Analysis of the migration** from App-V 4.1 on Windows XP SPx to Windows 7 App-V 4.6.
- ▶ **Analysis of compatibility** and best practice compliance ensures that each application installs and functions correctly on the Citrix and Terminal Service platform.
- ▶ **AOK Plug-ins:**
Legacy Help File Scan, Hard-Coded References, Un-Signed Driver Analysis, Legacy Control Panel Applet, TCP-IP Novell IPX-SPX Scan.
