

Matrix42 Easy Recovery

Easy Recovery, the imaging solution by Matrix42, significantly reduces risks such as data loss and other IT and business costs, while speeding up disaster recover.

With Matrix42 Easy Recovery you will always be protected from data loss. This innovative imaging solution helps you completely recover client infrastructure or restore it to any defined point in time – without reinstallation or downtime for the end user. Matrix42 Easy Recovery supports the strategic ITIL-based continuity management process. Business and support processes are optimized and IT productivity is increased, while costs are reduced permanently.

Highly integrated imaging solution with centralized workstation administration

- ▶ **Minimized downtimes**
Consistent productivity and reliability
- ▶ **Targeted restore**
Exact images for restoring systems at given points in time
- ▶ **Secure and optimized operating system migrations**
If problems occur during operating system migration, a rollback can be initiated with just few mouse-clicks.
- ▶ **ITIL-based IT Service Continuity support**

Exact Backups

The completely integrated imaging solution Easy Recovery by Matrix42 creates exact and identical backups of system and data partitions. Back ups include operating systems, applications, system and user settings. Differential backups run in the background, without interrupting user productivity. Easy Recovery also supports completely automated backups as required, for instance, every hour, day, week or month.

Systems can be restored very rapidly without the need to reinstall operating systems or applications manually. Data can be stored flexibly on network drives, backup partitions, hard disks or any USB and Firewire storage media.

Automated Restore at the Push of a Button

If a disaster occurs, you can use the Matrix42 Management Console to restore data. This is done either fully automatically or a wizard guides you through the restore process. Exact images allow you to select different restore points for individual systems. It is also possible to execute additional commands or internal scripts after the restore. If a hard disk needs to be exchanged, Empirum allows you to replicate the exact partitioning of the original hard disk.

Reduce downtime for greater end-user productivity

Systems can be restored at the push of a button after a virus attack, hardware defect or fatal system error.

Easy Recovery is a perfect complement to Matrix42 Personal Backup for complete business continuity.

- ▶ **Disk imaging**
Full backup of system and data partitions during operations – including operating system, applications, own files and folders and registry entries.
- ▶ **Flexible data storage**
Storage of data on network drives, backup partitions, hard disks or all USB and Firewire storage media.
- ▶ **Targeted automatic and manual restore**
Minimized downtimes and reduced administrative work
- ▶ **Data compression of images**
Optimum use of storage space
- ▶ **Scheduled restore points**
Exact definition of when which data back up should occur – every hour, day, week or month
- ▶ **Logging and auditing**
All activities on the end device and in the management console can be tracked and traced to comply with audit requirements. Compliance with standards such as SOX, Basel II and HIPAA.
- ▶ **Business continuity**
Use Matrix42 Easy Recovery and Matrix42 Personal Backup to ensure business continuity.
